

Sodium X-Module Upgrade

Extend the life of your WALTRON 9031C, 9032, and 9033 Sodium Analyzers, and add new functionality, control, and features

Waltron is pleased to announce to its customers another opportunity to get more value out of their existing 9031C/9032/ 9033-series Sodium Analyzers. This upgrade effectively converts your instruments to the latest "X-Module" control system.

While other manufacturers find ways to force their users to replace older equipment, Waltron believes that should be your decision to make – and an upgraded transmitter control system is an excellent option for many installations.

FEATURES

- Full-color touchscreen interface
- Intuitive, menu-driven operation
- Programmable calibration schedule (excl 9031C)
- Simple replacement of existing transmitter
- Integrated PLC / IPC control architecture
- Fieldbus, USB, Ethernet connectivity options
- Available for 9031C, 9032, and 9033 models
- No-hassle, one-year parts and service warranty
