

- Dual redundant outputs
- Spring Return or Friction Clutch with detents
- Two lever height variants and color-coded inserts available
- Effectively zero below panel depth

The 846 series is a member of the generation of precice contactless input devices. The paddle combines the features of a contactless single axis joystick and a switch in one control. Analog signal output, switch signals and even PWM output can be customized. The new design with its innovative mechanism and ergonomic styling is specifically designed for robustness, strength and performance.

## Technical Data

| Sensor | Hall effect |
| :---: | :---: |
| Supply Voltage Vsupply | $5 \mathrm{VDC} \pm 0,5 \mathrm{~V}$ transient free |
| Output Voltages | $0 . .5 \mathrm{~V} / 0,5 . .4,5 \mathrm{~V}$ (Dual Output), PWM optional |
| Center Voltage | Vsupply/2 $\pm 5 \%$ * full scale |
| Current Consumption | < 20mA |
| Switch Output | Open Drain, pulled high within control via $1,5 \mathrm{k} \Omega$ to Vsupply, and smoothed to 0 V with 100 nF |
| Loads | Minimum $10 \mathrm{k} \Omega,>100 \mathrm{k} \Omega$ recommended |
| Mechanical Operating Angle | $50^{\circ}$ ( $\pm 25^{\circ}$ from center) |
| Max. load to mechanism | Horizontal: 75N / Vertical: IK08 (BSEN62262:2002) |
| Life Cycles | 5 million cycles (sprung version), 2 million cycles (detents) |
| Operating Temperature | $-25^{\circ} \mathrm{C} . .+70^{\circ} \mathrm{C}$ |
| Storage Temperature | $-40^{\circ} \mathrm{C} . .+70^{\circ} \mathrm{C}$ |
| Seal above Panel | IP67 (with gasket) |
| EMC Emissions | EN61000-6-3:2001 CISPR 22:2005 Class B 30MHz-11 GHz |
| EMC Immunity | $100 \mathrm{~V} / \mathrm{m}, 80 \mathrm{MHz}-2,7 \mathrm{GHz}, 1 \mathrm{kHz} 80 \%$ sine wave mod., EN61000-4-3 (extended) |
| ESD | EN61000-4-2 (extended), $\pm 8 \mathrm{kV}$ (20 contacts) \& $\pm 15 \mathrm{kV}$ ( 20 air discharges) |
| Vibration | $100 \mathrm{~Hz}-200 \mathrm{~Hz} @ 0,13 \mathrm{~g}^{2} / \mathrm{Hz}$, total $3,6 \mathrm{gRMS}$ ( 1 hour in each of three mutually perpendicular axes) |

## Information on „Lever Operation"

FRICTION with detents (the lever, clicks‘ into and stays at preset positions) at deflection angles:

$\pm 12,5^{\circ}$ \& $\pm 25^{\circ}$

$\pm 25^{\circ}$

SPRING RETURN with detents (the lever ,clicks' into preset positions and springs back to center position when released) at deflection angles:

$\pm 12,5^{\circ}$

$\pm 12,5^{\circ}$ \& $\pm 25^{\circ}$

$\pm 25^{\circ}$

## Information on „Output Options" and „Switching Points"

The 846 series joystick is configured as two "electrical" controls in one mechanical package. The Paddle operates from 5V and provides two proportional outputs. The second output is accurate to the first within $+/-3 \%$ of the power supply. The power supply for the secondary output is also completely independent. Customers may choose their preference of voltage outputs. The secondary output can be of the same or inverse polarity to the primary wiper. For example, with a secondary inverse output, the first and second outputs can be summed and compared to zero to verify that the joystick is operating correctly. Paddles having two identical outputs of the same polarity may be used to drive two identical dual redundant circuits

The voltage outputs at center and at each end of travel are specified across an infinite load, with no current flowing. The output impedance specified in the electrical specification should be taken into account when designing a system. Load resistance of less than 10 K Ohms is not recommended (also ref. to „Technical Data" page 1)

Output Characteristics (here: 0,5-4,5V Output)
Note: When option „Dual Parallel Output" is selected the polarity of Switch 2 is inverted.

1) DUAL INVERSE OUTPUTS

2) DUAL PARALLEL OUTPUTS

Switches at $\pm 25^{\circ}$

Dimensions in mm

## Panel Cut-Out \& Mounting

The Joystick is fitted with M3 bushes in all six positions and may be mounted with two different hole pattterns:

- Two screws (shown in yellow)
- Four screws (shown in silver).

Screws are not included.
The appropriate length of the screws is dependent on panel thickness.
