

# Snokote-CL

A Long Lasting and Environmentally Safe, Anti-Corrosive Lubricant for ROV Steel Armored Umbilical

**Extend the life of your ROV umbilical**

Snokote-CL manufactured by Rovsco in Houston, Texas is a Corrosion Inhibitor specially formulated to protect ROV steel armored umbilical in a seawater and marine environment.

ROV umbilicals are continuously in use in seawater environment and are susceptible to corrosion. Snokote-CL provides a solution which is effective against corrosion, long lasting, and environmentally safe.

Snokote-CL is unique in the way it provides protection. Once applied it forms a bond with the steel armor of the ROV umbilical, staying in place and keeping the seawater from coming in contact with the steel armor.

Through maintaining a regular schedule of lubricating with Snokote-CL, you can extend the life of an ROV umbilical and save on expensive replacements.

### Snokote -CL is safe to use:

- Non-Toxic\*
- Non-Flammable
- Never leaves sheen on the seawater surface\*
- No VOCs
- Will not harm marine life

## Rovsco Xtreme™ Umbilical Lubricator

### High Pressure Lubricator for ROV umbilicals

Designed by Rovsco engineers to fully lubricate upper and inner layers of ROV umbilical steel armor to protect against corrosion. This lubricator is used in conjunction with high pressure pumps supplied by Rovsco.

The Xtreme cable Lubricators are used for lubricating new umbilicals before they go into service, or to lubricate existing ROV umbilicals already in the field.

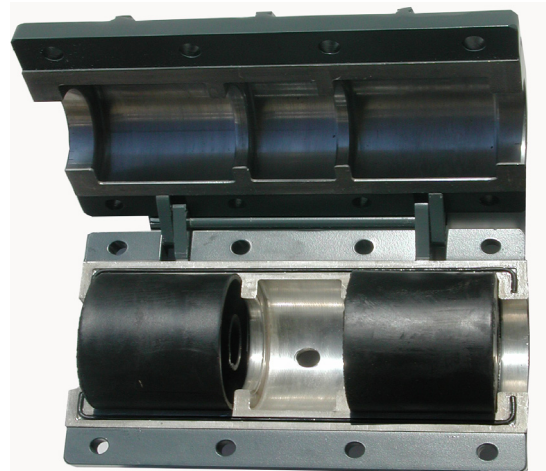

The lubricating process does not hinder or stop the regular ongoing ROV operation, as the Xtreme lubricator can be installed, used and removed without effecting the ongoing operation.

The ease of installation, use and removal of this tool lets the offshore personnel maintain a regular lubricating schedule of their ROV umbilicals to keep them corrosion free.

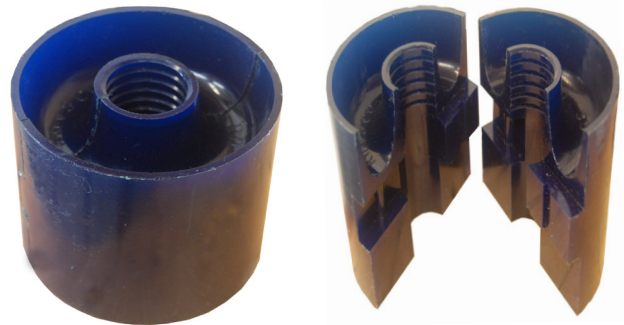

For best results, use Snokote-CL for lubrication.

#### Features:

- Rugged, can withstand high lubricant pressures.
- Accomodates a wide range of umbilical diameters.
- Unique Seal Design - ensures lubricant penetration deep within the armor layers resulting in total lubrication and coating.
- Easy installation and removal without hindering regular ROV operation.

**Unique Design Split Seals - Easy installation for umbilical diameters: 4 mm - 76 mm**
