Hub City Worm Gear Drives

Single, Double and Triple Reduction

Basic Specifications

- Power Ratings from 1/4 to 104 hp
- Output Torque to 80,000 inch/lbs
- Ratios from 5:1 through 216,000:1
- Output Speeds .0081 rpm to 350 rpm

Standard Features

- Over 30 series and 300 standard models available.
- Cast iron housing designed for superior thermal conductivity provides rigid gear and bearing support.
- Alloy shafting for greater strength.
- Hardened and ground worm and alloy bronze gear for greater wear life.
- 20° - 25° - 30° pressure angle design provides for more efficient operation and greater durability.

Optional Features

- Modified standard and custom designs
- Metric, servo or hydraulic input flanges
- CleanLine™ washdown and BISSC configurations
- Unique or harsh environment adaptations
- Three lube options: 600W, synthetic, polyglycol

Motorized Worm Gear Drives

- Motors produced by Marathon Motors for high efficiency, reliability and durability
- General or Definite Purpose Motors
- Brake or Inverter Duty motors, DC or Washdown motors
- Motor/gear drive package incentives available, consult factory

Hub City Worm Gear Drives

Design Features

New PowerCubeX® Worm Gear Reducers

Series 130 to W420 (1.33" to 4.25" Center Distance) Models

Features

What is the value of X?

- eXpanded model selection
- eXtended ratio offering
- eXceeds or meets previous power ratings
- eXtraordinary efficiencies
- eXact footprint match to most major brands
- eXciting new opportunities
- eXtreme environment protection available
- eXcellent performance
- eXpress assembly available
- 1.33, 1.50, 1.75, 2.06, 2.38, 2.63, 3.00, 3.25, 3.75, 4.25. . .
10 (X) sizes under 5" center distance

Additional Features

- Increased thermal capacity and Increased efficiency
- Smooth design for enhanced washdown characteristics
- Three lube options: 600W, synthetic, polyglycol, NO thermal limitations when specified with premium PAG or PAO synthetic lubricant
- Cast iron housing designed for superior thermal conductivity provides maximum surface area for increased heat dissipation and higher continuous ratings.
- Alloy shafting for greater strength.
- Worms design optimized for increased efficiency and higher continuous ratings
- Nickel-tin bronze worm gears for increased mechanical and thermal capacity, and have optimized face widths for higher horsepower ratings.
- 20° - 25° - 30° pressure angle design provides for more efficient operation and greater durability
- Ball bearings on all high speed shafts
- Tapered roller bearings on the low speed shaft
- Seals are Viton to allow higher operating temperatures and provide longer life
- Accessory kits such as Side Mount Flange Bracket Kit (shown), Vertical Mt Bracket & Shaft Kit (shown), Base Kits, J-Bracket Kits Riser Blocks and Torque Arm Kits are available for PowerCubeX® models (see pages B-97-106)

Notes:

PowerCubeX® models replace Universal PowerCube models.
See model index page B-12 for series and model page number.
See page B-5 for lubricant features.

Hub City Worm Gear Drives

Design Features

Century Series Worm Gear Reducers

Series 450 to 520 (4.50" to 5.16" Center Distance) Models

Features

- Cast iron housing provides rigid gear and bearing support.
- Alloy shafting for greater strength.
- Hardened and ground worm and alloy bronze gear for greater wear life.
- 20° - 25° - 30° pressure angle design provides for more efficient operation and greater durability.
- High speed shaft bearings are double tapered roller bearings on C-face quill type models
- Tapered roller bearings on high speed shaft on shaft input models
- Tapered roller bearings on the low speed shaft
- The 450 and 520 series have no dimension changes in the housing or other components, but they benefit from gearing improvements and synthetic oils as described below.
- Worms have improved heat treat for higher capacity, and polished threads for increased efficiency and higher thermal ratings.
- Worm gears have been upgraded to nickel-tin-bronze for increased mechanical and thermal capacity, and have optimized face widths for higher horsepower ratings.
- Shaft mounted models designed for direct mounting on drive shaft of equipment to be driven. Provides a positive and permanent alignment of reducer to the driven machine.
- NEMA "C" Flange Adaptor kits available for direct mounting to electric motor. (page B-97)
- Torque arm kits available see page B-105.
- **QD**® Bushings provide widest possible range of bore size, ease of installation and removal. Available in shaft mounted models in series 450 and 520.
- Thermal Block, Fan kits and Synthetic lubricants are available to increase thermal capacity
- Drop bearing design models provide overhung load support for trolleys, conveyors, agitators, mixers and other similar applications. Grease retainer at out board bearing for mounting output shaft vertically up. Large outboard bearing for long bearing life. Tandem Seals (Taconite) on output shaft with grease and purge holes provided.

Notes:

See model index page B-12 for series and model page number.
See page B-5 for lubricant features.

Hub City Worm Gear Drives

Design Features GW Series Worm Gear Reducers

Series GW60 to GW100 (6" to 10" Center Distance) Models

Features

- Rugged iron housings, covers, and flanges provide superior strength and rigidity.
- Two separate housings in the double reduction design insures long trouble free life of all components.
- The worm shaft is cut integral with the input shaft then hardened, ground, and polished to provide maximum efficiency with minimum gear noise.
- The bronze worm gear is chill cast from the highest quality bronze to provide superior wear and lubricity characteristics for longer life and higher efficiency.
- Premium tapered roller bearings on output shafts provide greater life, overhung load and thrust capacity.
- Oversized steel output shafts provide superior overhung load and torque characteristics.
- Large oil capacity provides positive splash lubrication and superior cooling capability.
- Metal nameplate drive screwed to housing insures easy field identification for repair parts and replacement.

- All units are 100% run and leak tested at the factory to insure that you receive the highest quality product.

Notes: See model index page B-12 for series and model page number.
See lubricant features below.

Lubricant Options for All Hub City Worm Gear Drives

- Hub City has done extensive testing on different oil types, to compare wear resistance, efficiency, and thermal ratings. Hub City publishes three sets of catalog ratings, with different oil types, so the customer can choose the ideal oil for each application. Ratings are provided for conventional mineral oil, such as Mobil 600W Cylinder Oil, traditional "PAO" (polyalphaolephin) synthetic oil, such as Mobil SHC-634, and the newer "PAG" (polyalkaline glycol) synthetic oil, such as Klubersynth UH1 6-460 and Mobil Glygoyle 460.
- The traditional "PAO" synthetic oil has broader temperature range, both high and low, increased efficiency for higher thermal ratings, and longer life for fewer oil changes, and needs no replacement in many applications.
- The newer "PAG" synthetic oil also has broader high and low temperature range, and has the highest efficiency for the maximum thermal ratings. THE PAG SYNTHETIC OIL ALLOWS ALL POWER CUBE UNITS FROM 130 SERIES THROUGH W420 SERIES TO RUN CONTINUOUSLY AT CATALOG MECHANICAL RATINGS, WITH NO THERMAL DERATING. This oil

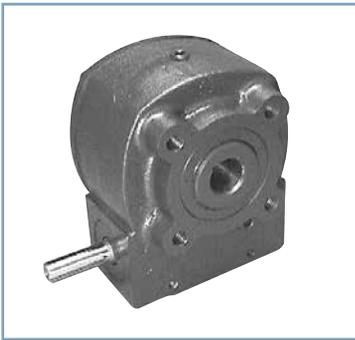

meets the FDA H1 approval for use in food plants where there is the possibility of incidental contact with food. The PAG synthetic oils also provide longer life for fewer oil changes, and need no replacement in many applications.

- NOTE: The PAG synthetic oils are NOT COMPATIBLE with any other types of oil, and oils must not be mixed. If changing a unit to or from PAG oil, the unit must be thoroughly flushed out with the new oil. Water can mix with the PAG synthetic oil, and does not separate, so this must be taken into consideration by protecting units from moisture ingestion, and in severe applications, oil changes may be required.
- Because PAG synthetic oils are not readily available in many locations, Hub City can provide units that are filled at the factory with PAG oil. These units have unique part numbers for permanent identification. The model numbers use an "L" suffix, such as 214L. Mounting position must be specified and included in the reducer description so the correct amount of oil is installed. (See pages B-10 and B-13)

Hub City Worm Gear Drives

Design Features

Worm Gear Reducers

W Series

Features

- Constructed with all cast iron alloy housings
- Tapered roller bearings
- Heavy-duty industrial seals
- Shaft mounted for direct mounting on drive shafts
- W300 also available with light weight aluminum housing

Torque Plus Helical Ratio Multiplier

Features

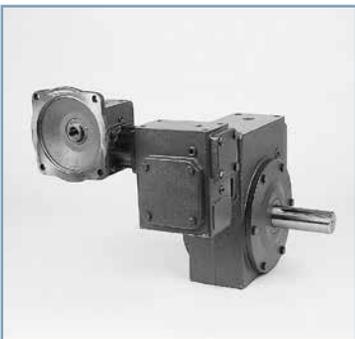

- One Cast Iron Model, One Aluminum Model (see page B-59), One Stainless Steel Model (See Section O)
- Ratios available from 2:1 to 7.5:1
- Can be used as reducer or increaser
- Provides additional reduction capability when mounted onto Helical Gear Reducer or Worm Gear Reducer
- C-flange or solid input shaft
- Helical gearing
- Double lip seals
- Base mounting available
- Permanently lubricated at factory

Double Reduction

Features

- Provides all the same basic features as the single reduction unit with two Hub City gearboxes connected
- Available in ratios from 50:1 to 3600:1
- 90 different models to choose from
- See Model Index page B-58 for series and model page number

Triple Reduction

Features

- Provides all the same basic features as the single and double reduction units with three Hub City gearboxes connected.
- Available in ratios from 1000:1 to 216,000:1
- Different models to choose from. Not shown in this catalog. See www.hubcityinc.com

Hub City Worm Gear Drives

Factory Options

The following factory options are also available for gear drives in this catalog. Contact the factory for details on price, availability, and specifications.

Cleanline™

See Section O

Features

- FDA approved white acrylic paint
- Corrosion resistant shaft treatment or stainless steel shafts
- Stainless steel hardware and nameplate

Options

- Motorized versions
- BISSC Standards

Metric Versions

Features

- Metric Motor flanges
- Metric shaft dimensions
- Metric mounting dimensions

Options

- Motorized versions
- Modified and Custom Designs

Modified and Custom Designs

If you have looked through this catalog and do not see exactly what you need, Hub City has the capability and engineering expertise to design and produce a special drive. Capabilities range from flange and shaft modifications, to custom housing dimensions. Consult the factory or your Hub City representative with your specifications.

Select hollow output bore models in this product line are now available with the HubLoc® Keyless Bushing System. Refer to pages i and ii at front of this catalog for features, available sizes, and ordering information.

Hub City Worm Gear Drives

Rating Parameters

Mechanical Ratings

The mechanical capacity of a worm gear reducer is generally based on the surface endurance limit of the bronze gear material, and the hardness and surface finish of the steel worm. In some low speed, high torque applications, the shear strength of the gear material may be the limiting factor.

Hub City mechanical catalog ratings are calculated to be used with a service factor of 1.0. This is for intermittent or continuous service free from shock loading, and a total duration of up to 10 hours per day. Applications outside these conditions require appropriate service factors to modify the allowable unit ratings. Table 1 defines the service factors for various operating conditions. Section A lists the AGMA service factors for various applications.

Thermal Ratings

The thermal capacity of a HUB CITY worm gear reducer is the actual horsepower (without service factor), which the reducer will transmit continuously for 2 hours or more without the oil temperature exceeding 200 deg F. The housing and gearing improvements in PowerCube allow continuous operation at higher horsepower. In addition, the standard high temperature seals and optional synthetic oils allow Hub City reducers to operate in excess of 225 deg F continuously, to maximize the thermal capacity.

Thermal ratings may be ignored when the continuous operating period does not exceed 2 hours and the shutdown period equals or exceeds the operating period. However, when the operating period exceeds 2 hours, or the operating period exceeds the shutdown period, thermal ratings must be considered.

A reducer should be selected with a thermal rating that meets or exceeds the ACTUAL horsepower to be transmitted. Synthetic oils increase the thermal rating, and may allow a smaller unit to be selected. The larger housings and improved gearing, with the appropriate synthetic oil, make cooling fans unnecessary on the 420 series and smaller. Cooling fans are still available on the 450 series and larger.

Note that thermal ratings assume an ambient temperature of approximately 75° F. With higher ambient temperatures, the thermal ratings will be approximately 1% less, per degree above 75° F.

Worm gear units have a run-in period of about 50 hours. The polished worms improve the initial efficiency, but the units may run hotter during the run-in period. Abnormal heating does not necessarily mean that the unit is beyond the thermal capacity, unless heating is excessive or continues beyond the run-in period.

Thermal Design Options

The improvements to the new HUB CITY worm gear reducers

reduce the need for some of the thermal design options that were offered in the past. The customer can use the comparative ratings with the 3 oil types to choose the ideal reducer for his application. (Cooling fans are still available as an option on the 450 series and larger.)

Mobil SHC 634 SYNTHETIC OIL is the traditional PAO (polyalphaolephin) type. This synthetic oil is recommended for all reducers to increase efficiency, reduce power consumption, extend or completely eliminate the need for periodic oil changes, and to increase the thermal capacity, potentially allowing the use of a smaller reducer for a given application.

The newer PAG (polyalkaline glycol) SYNTHETIC OIL provides the highest efficiency and thermal capacity, which exceed those obtained with the PAO Synthetic Oils. Since these oils are not readily available, HUB CITY offers a standard option of reducers filled at the factory with the PAG Synthetic Oil. This oil is not compatible with any other type of oil, and does not separate from water, so these factors must be taken into consideration in the unit selection, which may be affected by the environment the reducer is exposed to.

COOLING FANS are available as a factory installed option for all units from 450 through 520 series. Cooling fans are standard on GW60 through GW100 series reducers.

Cooling fans and synthetic oils may be used in combination and will provide compound effects to obtain the maximum thermal capacity for a reducer. The rating tables illustrate this.

Any continuous air circulation provided by the customer will increase the thermal capacity of all non-fan reducers, and potentially eliminate the need for thermal upgrades.

Pre-Selection Information

HUB CITY worm gear speed reducers are designed to permit many assembly variations.

Worm gear speed reducers are selected on the basis of gear ratio, speed, torque (or horsepower) and mounting required. Factory engineers and customer service personnel are always willing to assist with unit selection, in order to provide the most economical drive component.

The drive selection tables have been arranged so that once the gear ratio, speed, torque (or horsepower) and mounting are known, the HUB CITY model number can be easily obtained or determined. Service factors for various loads and power sources are also provided to effectively accommodate loading and power source fluctuations. The use of the tables require only a minimum effort to select the service factors.

Hub City Worm Gear Drives

Pre-Selection Information

ROTATION — Input (High Speed Shaft) to the Hub City “Worm Gear Reducer” can be either clockwise or counter-clockwise.

OPERATING CHARACTERISTICS

VELOCITY LIMITS — Worm gear speed reducers are limited in speed by the rubbing velocity of the gear set. Gear sets using a steel worm with a cast iron gear are limited to a rubbing velocity 500 feet per minute. Gear sets with a steel, heat treated ground worm and bronze gear are limited to a maximum rubbing velocity of 1,500 feet per minute.

Consult factory for ratings at speeds higher than shown in the standard rating tables.

MAXIMUM TORQUE — The minimum speed of 100 RPM DOES NOT illustrate the lowest recommended speed of the worm gear speed reducers. This minimum speed illustrates the maximum running torque of the gear box. The unit will efficiently run at speeds below 100 RPM. When it is necessary to know horsepower values at these lower speeds simply convert the torque shown at 100 RPM to horsepower using the actual operating speed.

Maximum momentary or starting torque is limited to 300% of rated capacity for worm gear speed reducers

Service Factors

The ratings for gear drives in this manual are based on a service factor of 1.00, for uniform load and uniform power source, up to 10 hours of operation per day. For other operating conditions, the application horsepower or torque must be multiplied by the appropriate service factor, to determine the equivalent gear drive power rating. A gear drive should be selected with a rated capacity equal to or greater than the equivalent rating.

Table 1 designates recommended service factors for various conditions of load, power source, and duration of service.

AGMA Service Factors for Worm and Helical Worm Gearmotors and Reducers are listed in Section A.

Refer to page A-2 for further information and cautions on the selection of proper service factors.

TABLE 1 — SERVICE FACTORS

PRIME MOVER	DURATION OF SERVICE PER DAY (1)	DRIVEN MACHINE LOAD CLASSIFICATION		
		UNIFORM	MEDIUM SHOCK	HEAVY SHOCK
Electric Motor	Occasional 1/2 hr.	*	*	1.00
	Intermittent 3 hrs.	*	1.00	1.25
	3 - 10 hours	1.00	1.25	1.50
	Over 10 hours	1.25	1.50	1.75
Electric Motor With Frequent Starts and Stops (2)	Occasional 1/2 hr.	*	1.00	1.25
	Intermittent 3 hrs.	1.00	1.25	1.50
	3 - 10 hours	1.25	1.50	1.75
	Over 10 hours	1.50	1.75	2.00
Multi-Cylinder Internal Combustion Engine	Occasional 1/2 hr.	*	1.00	1.25
	Intermittent 3 hrs.	1.00	1.25	1.50
	3 - 10 hours	1.25	1.50	1.75
	Over 10 hours	1.50	1.75	2.00
Single Cylinder Internal Combustion Engine	Occasional 1/2 hr.	1.00	1.25	1.50
	Intermittent 3 hrs.	1.25	1.50	1.75
	3 - 10 hours	1.50	1.75	2.00
	Over 10 hours	1.75	2.00	2.25
Reversing Service Application		Consult Factory		

* UNSPECIFIED SERVICE FACTORS SHOULD BE 1.0 OR AS AGREED UPON BY USER AND MANUFACTURER.

Explanatory Notes

1. Time specified for intermittent and occasional service refers to total operating time per day.
2. Term “frequent starts and stops” refers to more than 10 starts per hour.

Hub City Worm Gear Drives

How To Select and Order Standard Models

When ordering a worm gear reducer, it is necessary to select reducer size (series), gear ratio, model, and assembly style. If accessories are required, they must be ordered separately and in addition to the reducer.

SELECTION EXAMPLE. A belt conveyor, uniformly loaded, requires a direct coupled worm gear speed reducer to drive a light continuous belt. A 2 HP 1750 RPM electric motor is to be the prime move. Reducer output shaft must drive conveyor at approximately 115 RPM. The machine is expected to operate 24 hours per day.

STEP No. 1. Table 1 (page B-9) indicates service factor requirement of 1.25 for an electric motor drive under required 24 hour uniform load conditions.

STEP No. 2. Decide whether the application will require the reducer to be selected based on mechanical rating or thermal rating. Units may be selected based on mechanical rating only if the continuous operating period does not exceed two hours and shutdown period equals or exceeds operating period. Since our example requires 24 hours per day service the unit must be selected based on thermal capacity.

STEP No. 3. Calculate ratio required. Divide 1750 RPM input speed by 115 RPM required output speed. A 15:1 ratio is needed.

STEP No. 4. Refer to the Quick Selection Chart on (page B-14). Down the left side find the 15:1 ratio selection. Trail across this section on the 1.25 service factor line to the 2 HP column. The proper selection for this application is a No. 240PL Series standard unit. Thermal design options allow maximum flexibility in unit selection and application.

Additional rating information can be obtained by referring to the detailed rating data for each individual series. Rating data for each thermal design option is listed.

STEP No. 5. Refer to Model Index Chart (page B-12) and select the applicable model. In the above example, it states a direct coupled reducer is required with output shaft extensions is the proper selection.

After the selection process has shown the correct series worm gear speed reducer required, then the specific data listed below is needed to properly place an order for each of the models within a series.

To order motorized reducers, specify the reducer as shown, indicate the motor description as shown and specify "motorized assembly."

UNIT SERIES	SERIES	CENTER DISTANCE
13	130	1.33"
15	W150	1.50"
18	180	1.75"
21	210	2.06"
24	W240	2.38"
26	260	2.63"
30	300	3.00"
32	320	3.25"
38	380	3.75"
42	W420	4.25"
45	450	4.50"
52	520	5.25"
GW60	60	6"
GW70	70	7"
GW80	80	8"
GW100	100	10"

MODEL CONFIGURATION
Refer to Features pages B-3 to B-6 or Model Index pages B-12 and B-58 for model configurations available in each series

Note:
For Double reduction models a zero (0) is inserted ahead of this number
For Triple reduction models a five (5) is inserted ahead of this number
(a six (6) for models ending in zero (0))

Model 32 5 (K) (L) 30/1 B
Ratio 30/1
Style B
Gear Type WR
Frame Size 143TC
Output Bore 1.437
Motor C322 (B3)

MOUNTING POSITION
Pre-lubrication units only (See Page B-13)

MOTOR
See Section E for available motors

OUTPUT BORE
(Applies to model numbers ending in 2,3,5 or 6 only)
Refer to dimensional pages for output bore sizes available in each model.
-or- KLS: Unit accepts HubLoc® Keyless Bushing System

FRAME SIZE
(Applies to model numbers ending in 4,5,6,8 or 0 only)
Refer to dimensional pages for frame sizes available in each model

GEAR TYPE
WR : Worm Right (standard)
WL : Worm Left (mfg to order - consult factory)

OUTPUT STYLE
Refer to dimensional pages for styles available in each model

RATIO
Refer to ratings pages at the beginning of the single and double reduction sections for ratios available in each model

LUBRICATION
(Optional) Indicates unit is pre-lubricated with polyglycol lubrication.
Mounting position must be specified (See Page B-13)

(K) (Optional) Unit accepts HubLoc® Keyless Bushing System

Hub City Worm Gear Drives

Single Reduction Mounting Positions

For Lube Filled Units

Series 130 - GW100

NOTE: MOUNTING POSITION MUST BE SPECIFIED AND INDICATED IN REDUCER DESCRIPTION WHEN ORDERING PRE-LUBRICATED UNITS, SO THE CORRECT AMOUNT OF OIL IS INSTALLED AT THE FACTORY. REFER TO SECTION 5 FOR LUBRICATION INFORMATION.

 <p>B3 -WORM TOP- ALL SHAFTS HORIZONTAL</p>	 <p>B8 -WORM BOTTOM- ALL SHAFTS HORIZONTAL</p>
 <p>B6 -INPUT VERTICAL/DOWN- -OUTPUT HORIZONTAL - (FACTORY MODIFICATIONS MAY BE REQ'D)</p>	 <p>B6II -INPUT VERTICAL/UP- -OUTPUT HORIZONTAL- (FACTORY MODIFICATIONS REQUIRED UNLESS QUILL C-FLANGE INPUT)</p>
 <p>V5* -OUTPUT VERTICAL- -COVER SIDE UP- -INPUT HORIZONTAL- (FACTORY MODIFICATIONS REQ'D)</p>	
 <p>V5* REFERENCE MODEL XX3 & XX6 -SIDE MOUNT- (FACTORY MODIFICATIONS REQ'D)</p>	 <p>V5* REFERENCE MODEL XX2 & XX5 -VERTICAL MOUNTING KIT- (FACTORY MODIFICATIONS REQ'D)</p>
 <p>V6 -OUTPUT VERTICAL- -COVER SIDE DOWN- -INPUT HORIZONTAL- (FACTORY MODIFICATIONS REQ'D)</p>	

* V5 IS THE PREFERRED MOUNTING POSITION FOR VERTICAL OUTPUT
FOR VERTICAL OUTPUT, FACTORY MODIFICATIONS (GREAT PACK AND NILOS RING) MAY BE REQUIRED OR REVIEW
VERTICAL SHAFT LUBRICATION SPECIFICATION INCLUDED WITH VERTICAL SHAFT MOUNTING KIT.

ADDITIONAL RATINGS FOR OTHER INPUT SPEEDS ARE AVAILABLE AT WWW.HUBCITYINC.COM

*OVERHUNG LOAD - LOW SPEED SHAFT — MODELS 451 AND 454 2,200 LBS. AT CENTER POINT OF SHAFT EXTENSION.

MODELS 452, 453, 455, AND 456 NOT APPLICABLE. MODELS 457 AND 458 — OHL± 2,370 LBS., TO± THRUST OUT 3,330 LBS. AND TI± THRUST IN 3,140 LBS.

MODELS 459V AND 450V 2,000 LBS. AT CENTER POINT OF SHAFT EXTENSION. THRUST± UP OR DOWN 2,500 LBS.

**OVERHUNG LOAD - LOW SPEED SHAFT — MODELS 521 AND 524 2,600 LBS. AT CENTER POINT OF SHAFT EXTENSION.

MODELS 522, 523, 525, AND 526 NOT APPLICABLE. MODELS 527 AND 528 — OHL± 3,550 LBS., TO± THRUST OUT 4,530 LBS. AND TI± THRUST IN 3,360 LBS.

MODELS 529V AND 520V 2,300 LBS. AT CENTER POINT OF SHAFT EXTENSION. THRUST± UP OR DOWN 3,000 LBS.

±OHL AND THRUST VALUES SHOWN ARE INDEPENDENT FUNCTIONS AND CANNOT BE APPLIED SIMULTANEOUSLY. REFER APPLICATIONS WITH COMBINED OHL AND THRUST TO HUB CITY CUSTOMER SERVICE DEPARTMENT.

+ THERMAL RATINGS MAY BE INCREASED BY USING A THERMAL BLOCK KIT (PAGE B-94). CONSULT FACTORY FOR RATINGS.

OUTPUT TORQUE VALUES SHOWN ARE INCH-POUNDS (IN-LB).

NOTE: ALL TORQUE VALUES LISTED IN INCH-POUNDS, ALL OVERHUNG LOAD VALUES LISTED IN POUNDS. THE POINT OF APPLICATION OF THE OVERHUNG LOAD IS CONSIDERED TO BE ONE SHAFT DIAMETER MEASURED OUTWARD FROM THE GEAR CASE HOUSING. AT SPEEDS ABOVE 1750 RPM, UNITS MAY BECOME THERMALLY LIMITED. FOR EXTENDED OPERATION, LIMIT INPUT HP TO 1750 RPM CATALOG RATING.

THRUST AND OVERHUNG LOAD RATINGS (LBS.)	GW70	GW80	GW100
Thrust Load Ratings (Low Speed Shaft, All Ratios)	4009	4777	6808
Overhung Load Capacity* (High Speed Shaft, All Ratios)	450	450	50
Overhung Load Capacity* (Low Speed Shaft, All Ratios)	6209	7761	11028
Overhung Load Capacity** (Extended Brg Design Output Shaft, All Ratios)	3791	4850	8500

ADDITIONAL RATINGS FOR OTHER INPUT SPEEDS ARE AVAILABLE AT: WWW.HUBCITYINC.COM

*OHL AND THRUST VALUES SHOWN ARE INDEPENDENT FUNCTIONS AND CANNOT BE APPLIED SIMULTANEOUSLY. REFER APPLICATIONS WITH COMBINED OHL AND THRUST TO HUB CITY CUSTOMER SERVICE DEPARTMENT.

**THE POINT OF APPLICATION OF THE OVERHUNG LOAD IS CONSIDERED TO BE ONE SHAFT DIAMETER MEASURED OUTWARD FROM THE GEARCASE HOUSING.

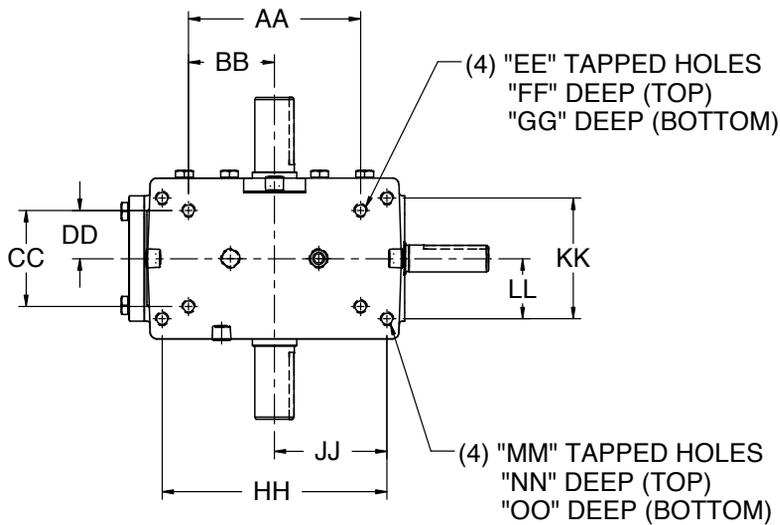

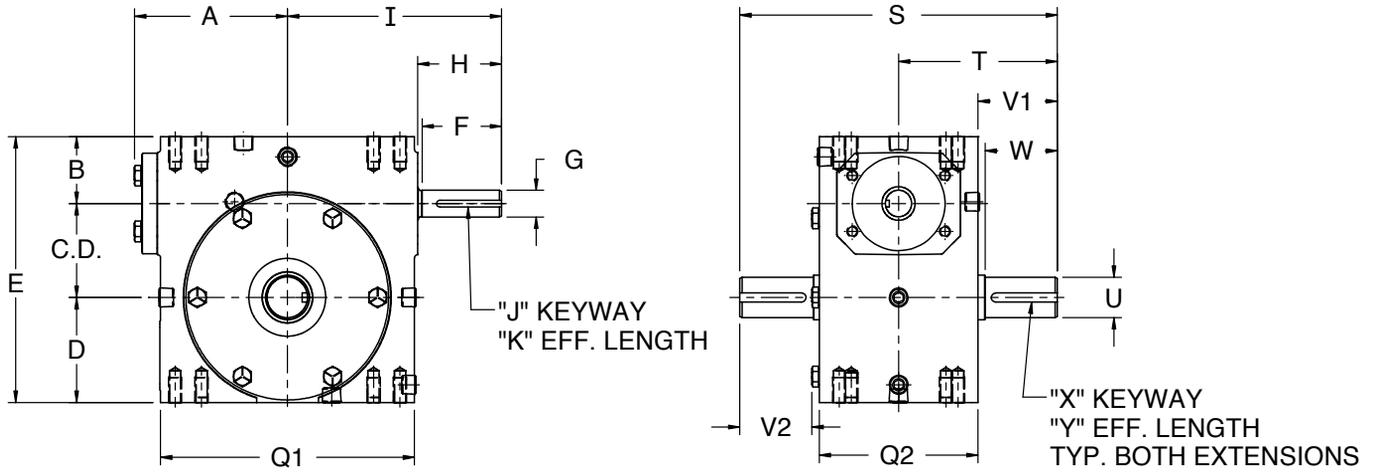

**LOAD LOCATED AT END OF OUTPUT SHAFT.

OUTPUT TORQUE VALUES SHOWN ARE INCH-POUNDS (IN-LB).

Hub City Worm Gear Drives

Single Reduction Model W300

Model W300 is a small, compact reducer that is adaptable to many applications in the medium horsepower range. Unit is shaft mounted for direct mounting on drive shafts. Two drilled and tapped holes on either side of housing for torque arm or other mountings.

Construction features include cast iron alloy housings, tapered roller output bearings, input ball bearings, bronze worm gear, and hardened and ground worm.

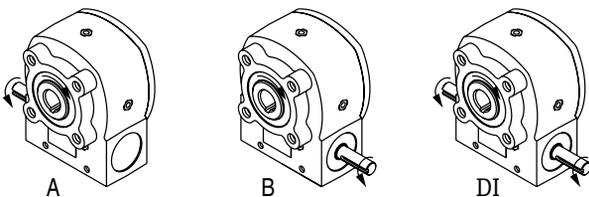

FOR LUBRICATION AND INSTALLATION INSTRUCTIONS REFER TO SECTION S.

METRIC AND SAE HYDRAULIC INPUT FLANGES AVAILABLE. CONSULT FACTORY FOR COMPLETE SPECIFICATIONS.

CONSULT FACTORY FOR VERTICAL SHAFT LUBRICATION RECOMMENDATIONS.

INPUT SHAFT CAN BE ROTATED IN EITHER DIRECTION.

Hub City Worm Gear Drives

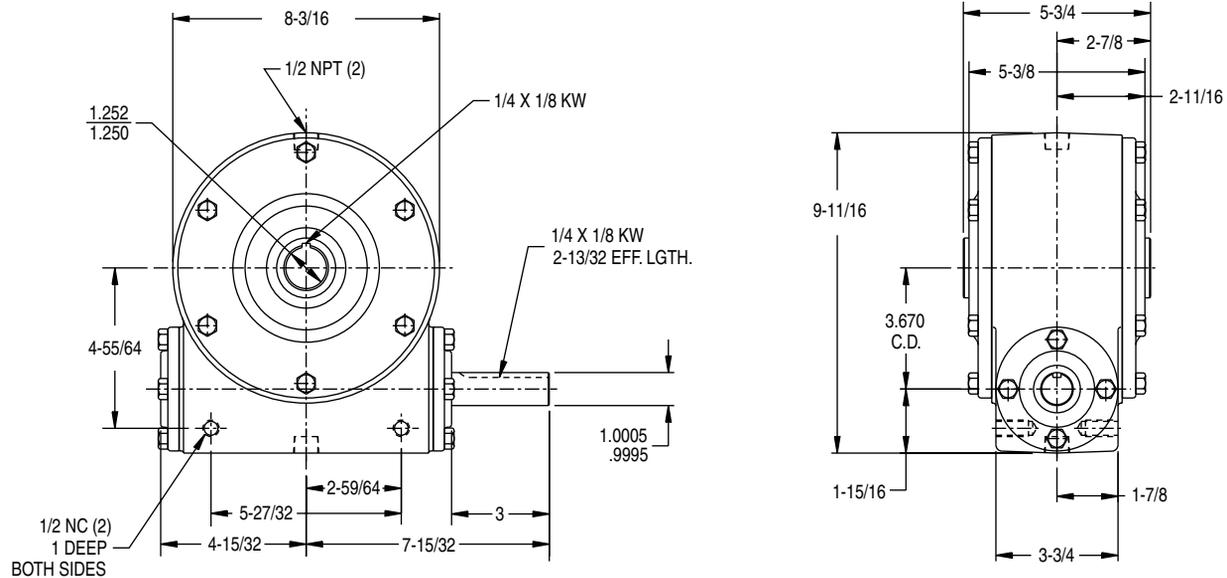

Single Reduction Model W50B

Model W50B worm gear reducers are sturdily built, compact, and have a high torque capacity. Output sleeve has hollow bore for direct mounting on driven shaft.

Tapered roller bearings and bronze worm gear for improved efficiency and smooth operation.

Construction with all cast alloy iron housings; heavy-duty industrial seals.

Factory installed "C" flanges are available on special order.

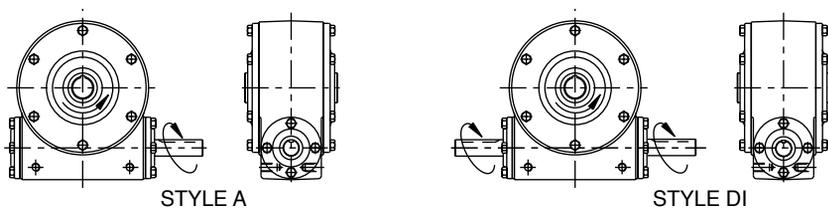

FOR LUBRICATION AND INSTALLATION INSTRUCTIONS REFER TO SECTION 5.

LUBRICATION RECOMMENDATIONS.

INPUT SHAFT CAN BE ROTATED IN EITHER DIRECTION.

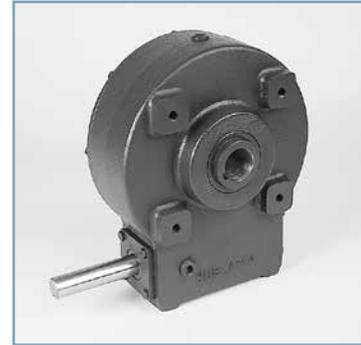

Hub City Worm Gear Drives

Single Reduction Model W516

Model W516 is ideally suited for apron drive applications on spreader wagons, bulk feed boxes, etc.

Constructed with all alloy cast iron housings, tapered roller bearings, and industrial type oil seals. Totally enclosed for oil lubrication.

Unit available with either bronze or cast iron worm gear. Also available with output shaft extensions or hollow bore for shaft mounting. Four mounting pads on either side of the housing are drilled and tapped 1/2" NC for direct mounting.

FOR STOCK OUTPUT BORES, QD BUSHING KITS, ACCESSORIES & OPTIONS REFER TO PAGE B-96 TO B-106.

Lubrication and Mounting Positions

FOLLOW THE LUBRICATION INSTRUCTIONS THAT ARE FURNISHED FOR THE PRIMARY, AND FINAL DRIVE OF YOUR HUB CITY DOUBLE REDUCTION WORM GEAR REDUCER.

THE TWO UNITS THAT MAKE UP THE DOUBLE REDUCTION ASSEMBLY HAVE INDEPENDENT OIL RESERVOIRS AND EACH MUST BE FILLED TO THE SPECIFIED LEVEL OF OIL INDICATED IN THE LUBRICATION INSTRUCTIONS.

CAUTION — THE DOUBLE REDUCTION WORM GEAR REDUCER MAY BE MOUNTED IN VIRTUALLY ANY POSITION. HOWEVER, IF THE FINAL MOUNTING POSITION IS SUCH THAT ANY OF THE SHAFTS IS IN A VERTICAL POSITION, IT IS SUGGESTED THAT YOU CONSULT THE FACTORY OR YOUR HUB CITY DISTRIBUTOR FOR SPECIAL LUBRICATION INSTRUCTIONS.

Hub City Worm Gear Drives

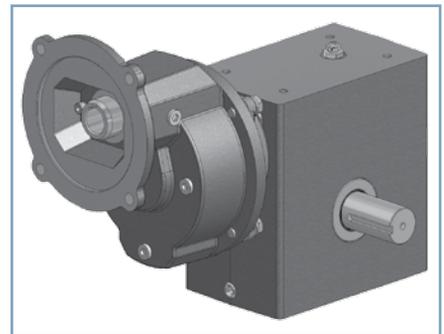

Double Reduction Models ARM1X, RM3 – Helical Ratio Multipliers

Features

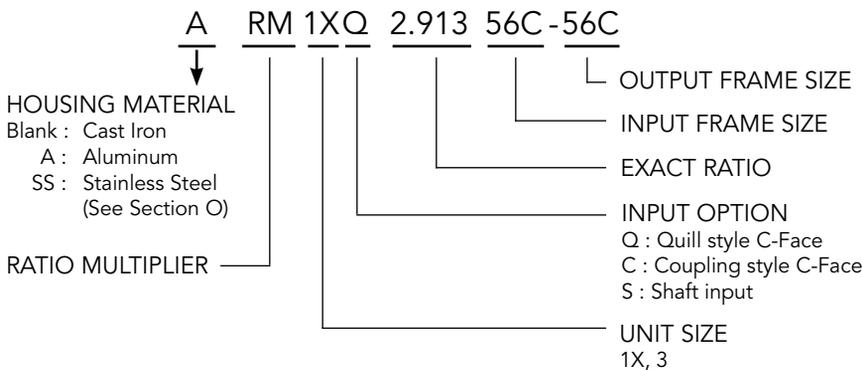

- New Aluminum Model – ARM1X consolidates and replaces both RM1 and RM2 cast iron and aluminum models
 - Same center distance and mounting as RM1
 - Power Ratings of RM2 (higher torque density)
- One Cast Iron Model – RM3
- One Stainless steel model SSRM1 (See Section O)
- Ratios available from 2:1 to 7.5:1
- Can be used as reducer or increaser
- C-Flange or solid input shaft
- Helical gearing
- Double lip seals
- Base mounting available
- Permanently lubricated at factory
- Provides additional reduction capability when mounted onto Helical Gear Reducer or Worm Gear Reducer

SINGLE REDUCTION UNITS PROVIDE OPPOSITE DIRECTION OUTPUT ROTATION

Model Nomenclature Example

Note: New Model ARM1X consolidates and replaces both RM1 and RM2 cast iron and aluminum models.

Helical Ratio Multipliers, when coupled with a C-faced single reduction worm speed reducer (see illustration) can create an efficient helical-worm double reduction speed reducer combination. Please refer to rating chart example below for selection instructions.

Note: See Section F for dimensions and available frame sizes of Helical ratio multipliers and pages B-30 to B-53 for dimensions and available frame sizes of single reduction worm speed reducers.

Also see Section F for ratings of Helical Ratio multipliers as stand alone parallel shaft reducers.

Helical-Worm Double Reduction Mechanical Ratings Selection Example

RATINGS @ 1750 INPUT RPM, 1.00 SERVICE FACTOR

USE THIS CHART WHEN COUPLING A HELICAL RATIO MULTIPLIER WITH A SINGLE REDUCTION WORM SPEED REDUCER

TOTAL RATIO	OUTPUT RPM	WORM SERIES	WORM RATIO	HELICAL SIZE	HELICAL RATIO	INPUT HP	EFF. %	OUTPUT TORQUE
40.00	43.8	VZ40	10	ARM1X	4.00	3.63	79.1	1613
40.00	43.8	260	10	ARM1X	4.00	6.29	78.1	2539
40.00	43.8	320	10	ARM1X	4.00	6.29	77.8	4070
40.45	43.3	380	10	RM3	4.05	6.29	79.2	7257
			10	RM3	4.05	6.29	80.2	11029
			10	ARM1X	5.11	0.64	72.1	378
			10	ARM1X	5.11	0.64	73.2	862
51.11	34.2	210	10	ARM1X	5.11	0.99	73.6	1340

NOTE: INPUT FRAME SIZE OF Worm speed reducer MUST match OUTPUT frame size of Helical ratio multiplier. (See dimensional pages reference above for available frame sizes)

See following pages for rating chart.

UNIVERSAL MOUNTING SPACERS ARE DESIGNED TO MATCH THE "D" MOUNTING HEIGHT FROM THE OUTPUT CENTERLINE TO THE BOTTOM MOUNTING SURFACE OF COMPETITIVE UNITS.

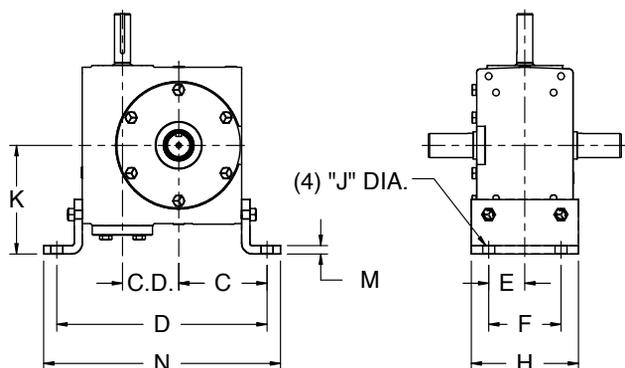

Riser Blocks

Riser Blocks provide a clear top mounting surface above the motor flange for mounting below machine framework etc.
