## ZETTLER CONTROLS, INC.

## COMPANY INTRODUCTION

Through traditional craftsmanship and engineering excellence, the Zettler name has symbolized quality and reliability in relays for over 100 years in demanding applications such as telecommunications systems, computer peripherals, office automation equipment, home appliances, security systems, test and measurement devices, and industrial controls.

Zettler Controls brings that same commitment to the HVAC/R and appliance markets with an offering of relays, thermostats, transformers, contactors, heat sequencers, temperature sensors, and fan centers. This group of products is used by the HVAC/R and appliance industries in both residential and commercial applications.

We welcome application challenges, stock over one million units, deliver quick turnaround, and excel at meeting the service level our customers require. Our unique combination of $100 \%$ quality testing, first-class sales and technical support, cost-effective product design and outstanding product availability offer a highly dependable and responsive resource for fulfilling your component needs.

You can count on Zettler Controls, Inc.

# UEB1-70 SERIES miniature circuit breaker 

## DESCRIPTION

UEB1-70 series Miniature Circuit Breaker provides excellent over- current protection and control of on/off operation in AC electrical systems. It has a voltage rating of up to 240 VAC and current up to 60 A .

## FEATURES

- New terminal design to allow multiple quick connect terminations.
- Removable metal brackets allow the breaker to be flush mounted/ surface mounted, or totally removed for din rail mounting.
- Mechanical switch for manual circuit disconnection.
- On/Off display indicator
- Performance unaffected by position mounting
- UL 489

GENERAL DATA

| Rated Insulation Voltage | 690 VAC |
| :---: | :---: |
| Agency Approvals | UL489 |
| Operating Altitude | $\leq 2000$ meters $(6562$ feet $)$ |
| Ambient Temperature | Operating: $-10^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}\left(-14^{\circ} \mathrm{F}\right.$ to $\left.140^{\circ} \mathrm{F}\right)$ |
|  | Storage: $-40^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}\left(-40^{\circ} \mathrm{F}\right.$ to $\left.158^{\circ} \mathrm{F}\right)$ |
| Relative Humidity | $90-95 \% \mathrm{RH}$ (below $\left.40^{\circ} \mathrm{C} / 104^{\circ} \mathrm{F}\right)$ |
| Torque | M 8 Screw (Box terminal -Lead wire) |
| 35 to 44 in- lbs |  |

ELECTRICAL DATA

| Rated Voltage | $120 / 240 \mathrm{VAC}, 240 \mathrm{VAC}$ |
| :---: | :---: |
| Rated Frequency | $50 / 60 \mathrm{~Hz}$ |
| Interrupting Capacity | 10 KA |
| Electrical Endurance | 6000 cycles |
| Mechanical Endurance | 10000 cycles |

PART NUMBERING SYSTEM

| Blank | $120 / 240$ VAC |

## XMCO Series

## DEFINITE PURPOSE CONTACTORS

## DESCRIPTION

Zettler Controls XMC0 series of Definite Purpose Contactors are electromechanical switching devices designed ideally for the HVAC industry. The most common applications of our contactors are found in refrigeration, air conditioning and heating. Other applications include elevators, food service equipment, cranes, hoists, welding machines, power supplies, vending machines, lighting, pumps and compressors. XMCO contactors are built to the ARI 780/790 standard in our ISO 9001 manufacturing facility for high performance and great reliability. XMC0 is available in various pole configurations and load ratings up to 90 amps.

## FEATURES

- A variety of termination options for specific application requirements
- Universal mounting plate: Easy replacement of competitor's contactors
- Heavy-duty contacts ensure long electrical life
- EE lamination (magnetic assembly) provides optimum performance while reducing power consumption
- Performance unaffected by position mounting
- Dust-free internal construction
- SCCR (short circuit current rating) 100kA, 600VAC
- Class F Coil Insulation
-UL, CUR file no. E222994
- Meets ARI 780/790 Guidelines

## DEFINITE PURPOSE CONTACTORS

GENERAL DATA

| Rated insulation voltage | 690 Vrms |
| :---: | :---: |
| Di-electric strength | 2500 Vrms (coil to contact \& contact to contact) |
| Designs/conforms to | IEC 60947-4-1, GB14048.4, EN60947-4, ARI780 / 790 |
| Agency approvals | UL,CUR file E220475 |
| Operating position | Vertical and Horizontal mounting recommended |
| Operating altitude | 2000 meters without derating |
| Ambient temperature | Operating: $-25^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ * |
|  | Storage $-40^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ |
| Shock resistance $(1 / 2 \sim \text { wave })=11 \mathrm{~ms}$ | Contact Open: 6 g ; Contact Closed: 15 g |
| Vibration resistance (5-300Hz) | Contact Open: 2 g ; Contact Closed: 4 g |
| Weight | 20-40A: $230-420 \mathrm{~g}, 50 / 63 \mathrm{~A}: 650 \mathrm{~g}, 75 / 90 \mathrm{~A}: 1550 \mathrm{~g}$ |
| Torque | Screws 25 lb -in/Lugs 40 lb -in for 20-40FLA types |
|  | Screws 45 lb -in/Lugs 50 lb -in for 50-63FLA types |
|  | Screws 50 lb -in/Lugs 60 lb -in for 75-90FLA types |
|  | Screws 8 lb -in for Auxiliary Contact Blocks |
|  | Coil Screws 8 lb -in for 3-pole 30-40FLA and 12 lb -in for 50-90FLA types |
|  | Main Screws $12 \mathrm{lb}-\mathrm{in} /$ Auxiliary Screws $8 \mathrm{lb}-\mathrm{in} /$ Coil Screws 8 lb -in for small frame types |
| QC Wiring | The female connector should meet IEC 60760, necessary to ensure the reliability of connection between female connectors and QC terminals |

* The overall combined temperature must not exceed the coil insulation max temperature of 155C.

## ELECTRICAL DATA

## ZC9034 Series

## 2-POLE HVAC/R RELAYS

## DESCRIPTION

The ZC9034 Series switching relays are intended for many applications in air conditioning, refrigeration and heating. Other uses include general purpose switching in appliances, fan controls and vending machines. Our relays are available in 24, 110/120 and 208/240 AC coil voltages with various combinations of power and pilot rated contacts.

## FEATURES

- Replaces Honeywell, White-Rodgers/RBM, MARS, Products Unlimited
- Quick-connect terminals for termination

- $2.13 \times 1.88 \times 2.25 \mathrm{in}$.
- Base designed for easy replacement of competitive relays
- Molded terminal numbers and circuit diagram on top of relay
- Dual coil terminals available
- Temperature range $-40^{\circ} \mathrm{C}$ to $130^{\circ} \mathrm{C}$
- Insulation: $130^{\circ} \mathrm{C}$ Class B
- Mechanical life: 1,000,000 operations
- Electrical life: 250,000 operations
- UL, CUR file E222994
- Meets ARI 780 requirements*

*Power Terminals 1-2-3, Pilot Terminals 4-5-6
Single coil terminals are standard. For dual coil terminals add suffix "-01"

## MECHANICAL DATA

## WIRING DIAGRAM

# 3ARR3, 3ARR22 Type MOTOR START POTENTIAL RELAY 

## General Description

A voltage sensitive, electromagnetic type motor starting relay with normally closed snap-action contacts used to disconnect the start capacitor on capacitor-start, induction-run and capacitor-start, capacitor-run motors. The relay has a protective cover which eliminates the need for additional electrical and mechanical protection. A variety of mounting brackets are available. Terminals may be either Quick Connect Tab Type or Screw Type.

## Typical Applications

- Central air conditioner compressors
- Submersible pump motors
- Motors generally over $1 / 3 \mathrm{HP}$ with start capacitors

## Operation

The relay is energized by a magnet coil electrically connected across the start winding of the motor and responds to the increase in start winding voltage as the motor accelerates from zero to the normal running speed. The relay contacts are actuated by the armature of the relay to disconnect the start capacitor at a speed where the motor has sufficient torque to bring it up to normal running speed. The relay remains energized during the run operation of the motor, keeping the relay contacts open. When the motor is de-energized, the relay contacts re-close for the next motor start. Each relay is designed for a specific application which includes the coil rating for continuous run voltage and the pickup and dropout calibration for proper motor starting.

## Terminals

- Quick Connect Type
$0.250 "$ x $0.032 "$ ( $6.3 \mathrm{~mm} \times 0.8 \mathrm{~mm}$ )
- Screw Type, Tin Plated Brass
\#8-32 Thread

## Electrical Ratings

- Contacts

35 Amperes max, $50 / 60 \mathrm{~Hz}$, break only (3ARR3)
50 Amperes max, $50 / 60 \mathrm{~Hz}$, break only (3ARR22)

- Continuous Coil Rating
$60 \mathrm{~Hz} ; 130$ to 500 Volts
$50 \mathrm{~Hz} ; 117$ to 470 Volts
See Appendix " $B$ " for Coil Groups and Ratings.

Potential Motor Start Relay 35A and 50A Rating

## Endurance

- 100,000 to 500,000 operations
(depending on load)

## Mounting

- Mounting Bracket

Select from available brackets in Appendix "C".

- Mounting Position

Each relay is calibrated in the intended mounting position. Specify desired mounting position from Appendix " $D$ ".

## Circuits

If there is a terminal in position \#6, it must be the same polarity as terminals \#1, \#2, and \#4 to prevent possible flashover. If there is no terminal in \#6 position, \#4 can be either polarity.

Isolated Coil Circuit

# 3ARR3, 3ARR22 Type 

## GENERAL OUTLINE DIMENSIONS

## Application Procedure

Use the part number scheme from Appendix " $A$ " to create part number requirements.

## Calibration

Relay is factory calibrated for pickup and dropout voltages to match motor speed and torque curves for the specific application requirements. See Appendix " $B$ " for calibrations available for each coil group.

## Agency Approvals

UL File \#SA 44129
CSA included in UL
IEC 730-1, IEC 730-2-10, IEC 79-15
VDE License - (3ARR3 only)

## APPENDIX A (Ordering Part Number)

Relay model number (Example: 3ARR3AA2A1)

* Mechanical Form per appendix C or assigned by the ZC Application Engineer as required.
** Basic Model Type is selected based on capacitor disconnect current ("3" for 35A) ("22" for 50A).
APPENDIX B

ZC MOTOR START RELAY (3ARR3, 3ARR22) DATA CUSTOMER COLD PICK-UP AND DROP-OUT FOR EACH COIL GROUP
COIL GROUPS ARE U.L. CLASS B RATINGS AND VDE RECOGNIZED.

CAL IBAATION WALUES ARE BASED ON
AVERAGE COIL COPPER TEMPERATURES

${ }^{\circ} \mathrm{C}$ 10 H

## 3ARR3, 3ARR22 Type

## APPENDIX C (Mechanical Form)

# 3ARR3, 3ARR22 Type 

## APPENDIX D (Mounting Positions)

## ZCPR Series

## MOTOR START POTENTIAL RELAY

## FEATURES

- 50A switching capability
- SPST-NC configurations
- .250" quick connect termination
- ISO 9001 certified
- Variety of mounting positions
- UL, CUR SA11095
- Non-position sensitive design*

GENERAL DATA

| Life Expectancy | Minimum operations |
| :--- | :--- |
| Mechanical | $7.5 \times 10^{5}$ |
| Electrical | $5 \times 10^{5}$ at 16A 400VAC |
|  | $2 \times 10^{5}$ at 35A 400VAC (break only) |
|  | $1 \times 10^{5}$ at 50A 400VAC (break only) |
| Dimensions (mm) | $51.2 \times 46.6 \times 36.5$ |
| Construction | Unsealed |
| Weight | Approx. 110 grams |
| Ambient Operating Temp. | $-20^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ |

UNIVERSAL BRACKET MOUNT ( Unit: mm)

www.zettlercontrols.com

# ZC24A34 Series <br> <br> ELECTRIC HEAT SEQUENCERS 

 <br> <br> ELECTRIC HEAT SEQUENCERS}

## DESCRIPTION

The positive temperature coefficient (PTC) heater element provides voltage compensation over a wide voltage range without danger of over-heating at high voltage. It is self-current limiting, and assures device actuation under low voltage conditions. The PTC has a unique feature of always stabilizing temperature, regardless of ambient temperature or voltage range.

## KEY FEATURES

- Solid State PTC Heaters
- Replaces most Klixon \& TOD Brands

(ZC24A34-3)
- Quick-Connect Terminals
- Shock and Vibration Resistant
- Mounts in any position
- Contact Ratings - to 25 Amps at 120 or 240 Volts, and 12.5A at 480 Volts
- Full-Load Rated Auxiliary Contacts
- Standard Operating Ambience Between - $50^{\circ} \mathrm{F}\left(-45.5^{\circ} \mathrm{C}\right)$ and $165^{\circ} \mathrm{F}\left(73.8^{\circ} \mathrm{C}\right)$
- Custom Timing's Available
- UL File E237660, UL873; CSA approved

## APPLICATIONS

Sequencing of heater banks in:

- Electric Furnaces
- Baseboard Heaters
- Duct Heaters
- Suspension Heaters
- Recreational vehicle blower and element control
- Heat pump blower and heating element control
- Motor speed switching in air conditioning (high speed) / heating systems (low speed) where a single set of contacts handle combination motor and heater element loading in the heating function.
- Control circuits requiring definite sequence on both start up and shut down.

## ZC24A34 Series

## ELECTRIC HEAT SEQUENCERS

## TABLE NOTES

(1) M1-M2 and M3-M4 are always the first switches to turn ON and last to turn OFF. All other switches are random ON and random OFF.
(2) 24A34-14 Switch contacts designated F1-F2 instead of M1-M2.

ON TIME - Elapsed time to make contacts after heater is energized (Min. to Max.)
OFF TIME - Elapsed time to make contacts after heater is de-energized (Min. to Max.)
OFF Timings determined after PTC heater has been electrified for a total of 5 minutes.
Standard Timings determined at $25^{\circ} \mathrm{C}$. Timing's at temperatures above or below $25^{\circ}$ will vary.
Canadian timings with CSA approval only.

- These contacts switch simultaneously

## OPTIONAL CUSTOMER 4 DIGIT SUFFIX

Custom ON and OFF Timings are available. A four digit suffix code will be added to model number with the closest Timings. i.e. DPDT sequencer with ON time of 1-60 and OFF time of 1-45 will be designated ZC24A34-3 XXXX. Please consult factory for further details.

| VAC | Resistive (Non-Inductive) |  | Motor Ratings (Inductive) | Pilot <br> No Contacts <br> (Terminals 1-3) | UL Endurance <br> Cycles |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Watts | Amps |  |  |  |  |
|  | 3000 | 25.0 | 10.0 A | 60.0 A | 125 VA | 100 K |
| 240 | 6000 | 25.0 | 5.0 A | 30.0 A | 125 VA |  |
| 480 | 6000 | 12.5 | 3.0 A | 18.0 A | 480 VA |  |

Combined Load Contact Ratings (All Models):

| VAC | Resistive (Non-Inductive) |  | Motor Ratings (Inductive) |  | Ombined <br> Amps |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Watts | Amps | Full Load | Locked Rotor |  |
| 240 | 5520 | 23.0 | 7 | 42 |  |

## HEATER-SWITCH ACTIONS AND CONFIGURATIONS

The ZC24A34-1 (reference Figure 1), ZC24A34-2 (reference Figure 2) utilizes one bi-metal disc to achieve single-timing operation. They are available in SPST (reference Figure 3) switch actions. This configuration can be automatically reset and built to close a set of contacts on temperature rise within a specified time range.

Figure 6 Double Pole Single Throw (DPST)

## ZC24A34 Series

## ELECTRIC HEAT SEQUENCERS

## HEATER-SWITCH ACTIONS AND CONFIGURATIONS

The ZC24A34-5 (reference Figure 7) utilizes two bi-metal discs in conjunction with one SPST and one DPST switch action to achieve two independent timings. The ZC24A34-6 (reference Figure 8) utilizes two bi-metal discs in conjunction with two DPST switch actions to also achieve two independent Timings. This configuration can be automatically reset, and built to close three or four sets of contacts on temperature rise within a specified time range.

Figure 8

## ZC24A34 Series

## ELECTRIC HEAT SEQUENCERS

## HEATER-SWITCH ACTIONS AND CONFIGURATIONS

The ZC24A34-14 (reference Figure 9), utilizes four bi-metal discs in conjunction with one SPST and two DPST switch actions to achieve four independent Timings. This configuration can be automatically reset, and built to close five sets of contacts on temperature rise within a specified time range.

Figure 9

## TERMINALS

Standard terminal types are listed below. Special switch terminals such as double quick connects and female quick connects may be available for a specific switch terminal. Consult sales for details.

## SWITCH TERMINALS

1. Solder type
2. Screw type -0.250 " $\times 0.032$ " $(6.35 \times 0.81 \mathrm{~mm})$ Q.C.

## HEATER-SWITCH ACTIONS AND CONFIGURATIONS

Standard heater terminals are $15^{\circ} 0.250^{\prime \prime} \times 0.032(6.35 \times 0.81 \mathrm{~mm})$, double brass male quick connects. The stage terminals are tin-plated brass.
1.Solder type
2. Screw type- 0.250 " $\times 0.0 .32$ " Q.C (Double Q.C terminals available at additional cost) Use 12 gauge or larger wire for loads greater than 15 amperes.

## ZC24A34 Series

## ELECTRIC HEAT SEQUENCERS

## HEATER-SWITCH ACTION AND CONFIGURATION

The ZC24A34-15 (Figure10) utilizes a single bi-metal disc in a single pole double throw configuration. The SPDT switch action allows for a single set of timings. Mainly used in heat pump air handlers by providing a delay to the blower motor in cooling mode.

## STANDARD TIMINGS

| Model Number | Timings | Switches | ON Timing | OFF Timing |
| :---: | :---: | :---: | :---: | :---: |
| ZC24A34-15 | 1 | 1 | $1-25$ | $65-115$ |

## RELAY/TRANSFORMER FAN CENTER ASSEMBLY

## DESCRIPTION

Zettler Controls, Inc. fan center controls provide convenient low voltage for one and two speed fan motors and auxiliary circuits in heating, cooling or heating/cooling applications. Each ZC fan center control is a reliable, compact unit, consisting of a 24 volt control transformer and a plug-in switching relay mounted on a 4" square electrical junction box cover. All line voltage connections are made inside the box with color coded pre-stripped leads. Low voltage connections are made at a convenient terminal board mounted to the transformer.

FEATURES

- DPDT, DPST, SPDT, SPST configurations
- 24 V coil voltage, power and duty rated contacts
- Color coded pre-stripped leads
- Low voltage terminal board

- Input voltage $120 \mathrm{~V}, 208 / 240 \mathrm{~V}$ or $120 / 208 / 240 \mathrm{~V}$
- Mounts directly to 4 " electrical box
- UL, CUR file E237660

## 30 VA - 50 VA QUICK CONNECT CLASS 2 UL 1585 TRANSFORMER

## FEATURES

- 30VA - 50 VA Inherently energy limited
- Compact frame size
- No secondary fusing required
- Low heat rise
- $50 / 60 \mathrm{~Hz}$
- Input voltages $120-575 \mathrm{~V}$, output 24 V
- Terminations with quick-connect top, one side, or both sides
- Panel mount, foot-mount, adapter plate
- Customization for wire length, color, terminations and other customer requirements
- Split bobbin design
- Class B insulation system $130^{\circ} \mathrm{C}$ rated
- UL/CUR File E214561

## NTC Thermistors

## DESCRIPTION

Through traditional craftsmanship and engineering excellence, the Zettler name has symbolized quality and reliability in electrical components for over 100 years in demanding applications such as telecommunications systems, computer peripherals, office automation equipment, home appliances, security systems, test and measurement devices, and industrial controls.

We also bring that same commitment to the HVAC/R market with an offering of relays, transformers, contactors, heat sequencers, temperature sensors, and fan centers. This group of products is used by the HVAC/R industry in both residential and commercial applications.

We welcome application challenges, stock over one million units, deliver quick turnaround, and understand demanding service requirements. Our unique combination of $100 \%$ quality testing, first-class sales and technical support, cost-effective product design, and outstanding product availability offer a highly dependable and responsive resource for fulfilling all your HVAC/R Components needs.

# NTC Thermistors THERMISTOR CHARACTERISTICS 

## CONTINOUS TEMPERATURE SENSING

Zettler NTC Thermistor Sensors offer economical, accurate and reliable solutions to those applications requiring more extensive sensing than one or two temperature points. NTC thermistor sensors provide a change in resistance with temperature when combined with an electronic circuit and provide a means of continuously measuring temperature over a wide range.

## NTC THERMISTOR SENSOR FEATURES

- Economical
- Long-term stability
- Custom sensors to fit customer requirements
- Custom sensor housings to fit customer requirements
- A wide variety of packaging options available

## OPERATING PRINCIPLES OF NTC THERMISTOR SENSOR

An NTC thermistor is a ceramic semiconductor made with various metal oxides. Their electrical resistance decreases with increasing temperature. This resistance is processed by an electronic circuit to provide temperature measurement. The thermistor itself does not provide any control over heating elements, relays, etc. The thermistor is strictly a sensor and any electrical control would need to be implemented by the circuit utilizing the thermistor.

# NTC Thermistors THERMISTOR TERMINOLOGY 

## NEGATIVE TEMPERATURE COEFFICIENT (NTC)

An NTC thermistor is one in which the zero-power resistance decreases with an increase in body temperature.

## ZERO-POWER RESISTANCE (RT)

The zero-power resistance is the DC resistance value of a thermistor measured at a specified temperature with power dissipated by the thermistor low enough that any further decrease in power will result in not more than $0.1 \%$ (or one-tenth of the specified measurement tolerance, whichever is smaller) change in resistance.

## RATED ZERO POWER RESISTANCE (R25)

The zero power resistance is measured under the standard temperature of $25^{\circ} \mathrm{C}$.

## B VALUE (UNIT: K )

The $B$ value is a constant describing the physical characteristic of the NTC thermistor material, also called the thermistor coefficient.
That is: $\quad=\ln (\mathrm{R} 1 / \mathrm{R} 2) /(1 / \mathrm{T} 1-1 / \mathrm{T} 2)$
R1-Resistance at Temperature T1
R2-Resistance at Temperature T2
B value is usually determined by zero-power resistance at $25^{\circ} \mathrm{C} / 85^{\circ} \mathrm{C}$ in American market and $25^{\circ} \mathrm{C}$ $/ 50^{\circ} \mathrm{C}$ in Asia market.

# NTC Thermistors THERMISTOR TERMINOLOGY 

## MAXIMUM OPERATING TEMPERATURE

The maximum operating temperature of a thermistor is the maximum body temperature at which the thermistor will operate for an extended period of time with acceptable stability of its characteristics. This temperature can be the result of internal or external heating, or both, and should not exceed the maximum value specified.

## MAXIMUM POWER RATING

The maximum power rating of a thermistor is the maximum power which a thermistor will dissipate for an extended period of time with acceptable stability of its characteristics.

## DISSIPATION CONSTANT

The dissipation constant is the ratio, (expressed in milliwatts per degree C ) at a specified ambient temperature, of a change in power dissipation in a thermistor to the resultant body temperature change.

## THERMAL TIME CONSTANT

The thermal time constant is the time required for a thermistor to change $63.2 \%$ of the total difference between its initial and final body temperature when subjected to a step function change in temperature under zero-power conditions.

Chart 2 - Thermal Time Constant

# NTC Thermistors THERMISTOR TERMINOLOGY 

## ZERO-POWER TEMPERATURE COEFFICIENT OF RESISTANCE (ALPHA )

Zero-power temperature coefficient of resistance is the slope of the R-T curve at any given temperature is used to express the point. It is a measure of the rate of change in resistance of the thermistor at a specific temperature. Alpha is expressed in $-\% /{ }^{\circ} \mathrm{C}$. As the R-T curve is not linear, alpha is greater at lower temperatures than at higher temperatures.

$$
\boldsymbol{\alpha}_{\mathrm{T}}=\frac{1}{\mathrm{R}_{\mathrm{T}}} \frac{(\mathrm{D} \mathrm{R}}{\mathrm{T})}{ }_{(\mathrm{D} \mathrm{~T})}
$$

Alpha is useful for determining what tolerances are required for an application. For example, the alpha value at $25^{\circ} \mathrm{C}$ for a particular NTC was $-4.0 \% /{ }^{\circ} \mathrm{C}$, if the application requires a temperature accuracy $\pm 0.5^{\circ} \mathrm{C}$, then the NTC zero-power resistance at $25^{\circ} \mathrm{C}$ tolerance would need to specified as $\pm 2.0 \%$. (4.0\%* 0.5 )

## TOLERANCE ON RESISTANCE

This is a method of measuring precision in NTC thermistors. Tolerance is the percentage of variation in resistance at a specific temperature. Tolerance is always stated as a percentage at a specified temperature. The industry standard is to use $25^{\circ} \mathrm{C}$ as the base temperature, unless another temperature is specified.

## IMPORTANT NOTICE

The user must determine the suitability of our products for the application and assumes all risk and liability associated there with.

## THERMISTOR SENSOR TYPICAL APPLICATIONS

## HVAC/R APPLIANCE

- Air conditioners
- Boiler heating system
- Washing machines
- Clothes dryers
- Electric water heaters
- Toasters
- Micro-wave oven
- Electronic thermometers
- Fire detectors
- Home weather stations
- Oven temperature controls
- Dishwashers
- Pool and spa controls
- Refrigerator and freezer temperature controls
- Electric blanket controls
- Small appliance controls
- Electrical thermostat
- Solar collector controls
- Seat heating system control
- Intake air temperature sensors
- Water level sensors
- Outside air temperature sensors
- Engine block temperature sensors
- Oil level sensors

## INDUSTRIAL ELECTRONICS

- Commercial vending machines
- Gas flow indicators
- HVAC equipment
- Industrial process controls
- Microwave power measurement
- Photographic processing equipment

FOOD HANDLING AND PROCESSING

- Coffee makers
- Deep fryers
- Fast food processing
- Plastic laminating equipment
- Solar energy equipment
- Thermoplastic molding equipment
- Thermostats
- Water purification equipment
- Welding equipment
- Temperature controlled food storage systems
- Thermometers for use in food preparation

## THERMISTOR SENSOR PART NUMBERING SYSTEM

Zettler NTS Thermistor sensor is designed according to UL 1434 or customer custom requirements. All components have excellent reliability and are RoHS compliant. Precision range term $1 \%, 2 \%, 3 \%$ and $5 \%$.

## FEATURES AND BENEFITS

## THERMISTOR SENSOR BENEFITS INCLUDE:

- Engineered to specific application requirements
- Thermally responsive.
- Increased performance of the overall system in terms of energy consumption and ease of use.
- Reduced assembly cost and increased reliability.
- Rugged performance and long-term stability.

## PLASTIC OVER-MOLDED SENSOR FEATURES AND BENEFITS INCLUDE:

- Plastic provides a much higher protection against moisture over time.
- Plastic probes can be made into more application-specific shapes.
- Plastic probes can eliminate multiple-part assemblies for customers and reduce their labor and combined material cost.
- Lower weight content than metal probes can benefit transportation costs.
- Piece price is typically more economical than metal-based probes

# NTC Thermistors THERMISTOR SENSOR VARIETIES 

Zettler designed thermistor sensors use a variety of sensor types to further enhance their use in applications. The most common sensor is the axial glass encapsulated NTC thermistor which can be supplied with tight tolerances at multiple temperatures.

## STANDARD PLASTIC MATERIALS

Standard plastic materials selections are based on use, probe shape, response time and cost. The most commonly used plastics are General Electric's Valox and Chevron Phillips Chemical's Ryton. The advantages of plastic are low cost, design shape flexibility and excellent moisture protection. Other protection methods are epoxy potted-metal housings and shrink tubing. Metal housings are typically brass, stainless steel or aluminum. The following are the most commonly used plastics. Customer-specified plastics can also be used.

- Valox - inexpensive, acceptable for use with food products
- Polypropylene - very inexpensive, low temperature rating
- Ryton - high temperature rating, good thermal conductivity, relatively expensive, harder but also more brittle than Valox or polypropylene.
- Other plastics used are Noryl and Ultem

Zettler can use all major brands of wire terminals and connector housings. The photos shown are just a small sampling of our capabilities. Please contact a Zettler Controls Applications Engineer for assistance in selecting the wire terminations and housings for your application.

Temperature sensor typical package types : Plastic housing sealed, Metal housing sealed, Combined housing sealed, Simple housing packaged.

Plastic housing sealed temperature sensor housing materials include Valox PBT, Ryton PPS, PP, Nylon, Ultem. Use proper plastic material according to customer different shape, thermal time constant, cost and application requirements etc. Economical, shape complexity, moisture resistance, performance stability and light weight are the advantages of this kind of sensors. Normal material sealed sensors can be used in $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ environment, special plastic sealed sensors can be used up to $+200^{\circ} \mathrm{C}$.

www.zettlercontrols.com

## NTC Thermistors

## THERMISTOR SENSOR VARIETIES

The NTC can be sealed completely in a plastic housing or can be exposed, this will be determined by customer's applications thermal response and dielectric strength requirement.

Metal housing sealed temperature sensor material options include Brass (copper), Stainless Steel, Aluminum etc. Quick thermal response, strong construction, easy to fasten, and high environment temperatures are some of the advantages. Some types can be used at $-40^{\circ} \mathrm{C}$ to $+250^{\circ} \mathrm{C}$ environment.

Combined housing sealed temperature sensor is normally housed by metal and plastic material together. It has the advantage of plastic housing sealed and metal housing sealed sensors, quick thermal response, strong construction, easy to have complex shape, easy to fasten, etc. to $+250^{\circ} \mathrm{C}$ environment.

## NTC Thermistors

## THERMISTOR SENSOR VARIETIES

Simple housing packaged temperature sensor, the NTC normally is packaged by Teflon or PVC heat shrink sleeve or sealed by epoxy. This kind of sensor has simple construction, is economical and has good thermal response. They normally can be used in a clean application environment without strict environment conditions.

## NOTES:

1. Custom orders are welcome.
2. If the model required is not listed, please submit the following information so our engineers can determine the correct product for you:
a. Operating temperature range, working criteria and dielectric requirements for the sensor (i.e.: air, water, oil, etc.).
b. Required temperature reaction time (thermal time constant).
c. Outline size (include drawing).
3. For your convenience, we have our own processing equipment for the terminations. Interface terminals can be processed and the guard sleeve can be assembled to your requirements.
4. We can develop temperature sensors with different types of specifications and outlines to meet your needs.
