High Power Connectors LV-HPC Series

More Power for Faster Charging

With the new LV-HPC Series Schaltbau charging connectors satisfy the requirements of DIN VDE 0623-589 for a high current-carrying capacity. Thus an active energy and battery management system that optimizes the current flows and preserves the battery becomes possible. After use, the batteries can be quickly recharged so as to minimize downtimes.

Due to its modular design, the charging connector can be adapted to customer requirements. Additional pilot contacts are available for use with battery management systems, which constantly monitor the condition of the (lithium-ion) battery, thereby guaranteeing maximum battery life.

Charging connectors must keep to the maximum temperature difference that is allowed to occur due to the charging process. The contact system of the LV-HPC Series is designed in such a way that the contacts are capable of carrying high currents with minimal self-heating.

In addition to pilot contacts, optional adapters for water top up and electrolyte circulation systems are available. For details refer to catalogue A841 "Multifunctional Adapters for Charging Connectors" or visit our website at www.schaltbau-gmbh.com

Features

Series LV-HPC

 **Schaltbau Power Bridge** – Keying according to DIN VDE 0623-589 for wet-cell and dry-cell batteries

- **Higher current-carrying capacity**

The new LV-HPC charging connectors comply with DIN VDE 0623-589 for a higher current-carrying capacity.

- **High-quality, screw-machine power contacts**

Due to an improved design, the contacts feature a higher current-carrying capacity, minimum contact heating and a continuous low contact resistance. With constant contact force over its working life, the connector is less susceptible to wear and tear while mating and unmating.

- **Modular design**

Standardized individual components can be used across the entire connector series. They allow for a customized and cost-effective realisation of your applications, and avoid unnecessary stocking of items.

- **Integrated lock function**

The mated shells of the LV-HPC Series connectors provide positive locking resistance to shock, vibration and other decoupling forces that may occur under normal conditions of use.

- **Intermateable with connectors of other manufacturers**

The LV-HPC Series is intermateable with all commercially available charging connectors to DIN VDE 0623-589 of comparable design - even when used with air tube adapter.

- **Keying to DIN VDE 0623-589**

Colour coded keying plugs are used for keying of conventional battery voltages. The colours stand for:

-  **Red:** Wet-cell battery, allowing for higher amperage
-  **Grey:** Wet-cell battery
-  **Green:** Dry-cell battery
-  **Yellow:** Vehicle plug, universal

The diagram shows a cross section of mated LV-HPC Series charging connectors keyed to 24 V.

- **High resistance to acids and extremes of temperature**

The material used for the connector shells including strain relief is made of a thermoplastic that is highly resistant to sulphuric acid of high concentration.

The proven housing material makes for the connector's ruggedness and suitability for use with temperatures ranging from -30 °C to +90 °C.

- **Optional adapters for electrolyte circulation and pilot contacts**

Air tube adapter: Schaltbau LV-HPC series charging connectors can be equipped with optional air tube adapters for use with batteries with electrolyte circulation system.

Pilot contact adapter: To be fitted with 2 optional pilot contacts which provide a data link between the battery management system and the charger.

Specifications

Series LV-HPC

*6 For use with LV160/250 and LV320/400 Series

Schaltbau Power Bridge

Modular design for scalable solutions between vehicle, battery and charger. The LV-HPC Series connectors guarantee a current-carrying capacity of 400 A.

LV-HPC: Charging plug/vehicle plug, front view

Do you need assembled connectors?

If so, do not hesitate to contact us! We supply receptacles and plugs complete with pre-assembled cables of different lengths and wire gauges and with a variety of cable terminal

ends for the battery to suit your requirements. Schaltbau guarantees a constant high quality of the pre-assembled connector.

Cables and terminal ends:

- Welding cables with rubber jackets according to DIN VDE 0282-6, e.g. H01N2-D
- Flex battery terminal conductor
- Perfect battery terminal conductor
- Battery terminal conductor with cable lug

Wire gauges:

- AWG 5 ... 4/0 (16 ... 95 mm²)

Wire connection:

- Main contacts: w/ crimping
- Pilot/aux. contacts: crimping

Marking of cables:

- Red shrink tube ⊕ - terminal
- Blue shrink tube ⊖ - terminal
- Product named on rubber jacket of cable

Strain relief:

- All cables are secured against stress and strain by the strain relief clamp being an integral component of the connector shell.

Air tube adapter:

- For air tube with inside diameter Ø 6 mm, wall thickness 1.5 mm, Shore 73 hardness.

Quality assurance:

- DIN EN ISO 9001:2000
- EN ISO 14001:1996

Pre-assembled cables

Schaltbau supplies connectors complete with pre-assembled battery terminal conductors to suit your application.

Flex battery terminal conductor

Perfect battery terminal conductor

Battery terminal conductor with cable lug

Note:

Presented in this catalogue are only stock items which can be supplied in short delivery time. For some variants minimum quantities apply. Please do not hesitate to ask for the conditions.

Special Variants:

If you need a special variant, please do not hesitate to contact us. Maybe the type of charging connector you are looking for is among our many special designs. If not, we can also supply customized designs. In this case, however, minimum ordering quantities apply.

Adapters Pilot contact adapter, Air tube adapter, Multifunctional adapter

Series LV-HPC

Adapter options for customizing your LV-HPC Series charging connector:

• Pilot contact adapter

Adapter to be fitted with 2 additional pilot contacts for monitoring the battery state and other control functions.

Pilot contact adapter	Ordering code		
	LV320/400 Series	LV160/250 Series	LV80/120 Series
Set*: 1x Adapter + 2x socket contact	LV160/320 P-S/S		LV80 P-S/S
Set*: 1x Adapter + 2x pin contact	LV160/320 P-P/S		LV80 P-P/S

* See also table on page 4

• Air tube adapter

Air supply for batteries with electrolyte circulation system. Electrolyte circulation ensures that the electrolyte is gently mixed by an airstream while the battery is being recharged and prevents the battery acid from becoming layered in the individual cells. This results in a shorter charging time and in reduced energy and water consumption.

Air tube adapter	Ordering code		
	LV320/400 Series	LV160/250 Series	LV80/120 Series
1x Adapter for receptacle shell* + 1x Spacer*	LV160/320 LV-S LV160/320 DS-L		LV80 LV-S LV80 DS-L
1x Adapter for plug shell*	LV160/320 LV-P		LV80 LV-P

* See also table on page 4

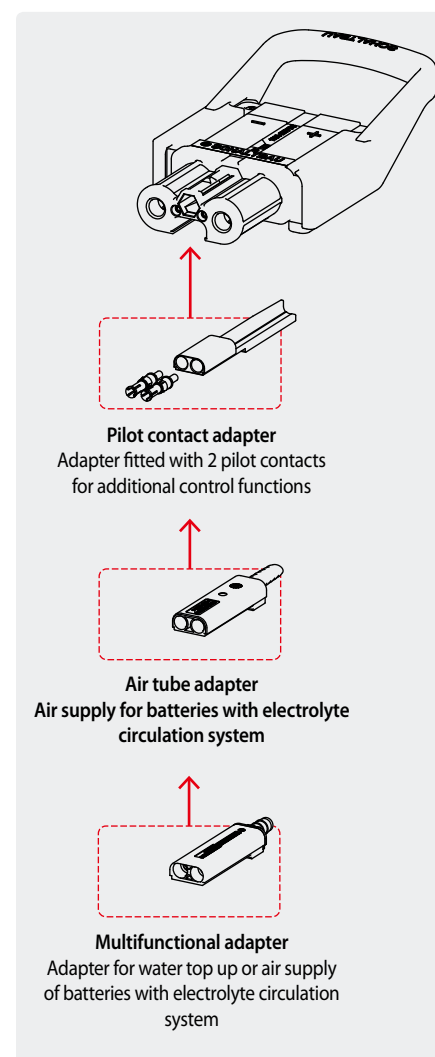

• Multifunctional adapter

Multipurpose adapter for water top up and electrolyte circulation systems. The new feature that the flow of air and/or water is shut off when the connector is unmated ensures that no acid particles enter the interior of the vehicle.

For more information, especially on the multifunctional adapter:

Extra air tube adapters

Accessories

Do you need an adapter for air tubes with greater inside diameter or thicker walls?

The extra air tube adapter becomes necessary when air tubes are used with:

- Inside diameter Ø 9 ... 10 mm
- Inside diameter Ø 6 mm and thicker wall

Extra air tube adapter	Ordering code	Fig.
Adapter for air tube with inside diameter 6 mm and thicker wall	LV80/160/320 V-S 6/6	①
Adapter for air tube with inside diameter 9 ... 10 mm	LV80/160/320 V-S 6/10	②

Installation and safety instructions

Accessories

The circular industrial connectors dealt with in this catalogue are intended for use with low-voltage systems and special installations. They are designed and tested in compliance with the generally recognised state of the art. However, the improper use, operation, handling, maintenance of or tampering with electric equipment can cause serious or fatal injury to the user or others, and the appliance or other property can be damaged.

Due to our continuous improvement programme, the design of our products can be modified at any time. So some features may differ from the descriptions, specifications and drawings in the catalogue.

You can download the latest update of the catalogue at schaltbau.info/download1en. The updated catalogue renders the previous issue invalid.

Electrical hazards: Any exposure to the connector's live parts. Risk of electrical shock!

Observe all applicable national provisions, all safety, accident prevention and environmental regulations as well as the recognized technical rules for safe and proper working.

Installation instructions

- Work on electric equipment may only be performed by a qualified electrician or trained personnel working under the direction and supervision of a qualified electrician according to the applicable rules of electrical engineering.
- The connectors supply power and signals. They are intended for plug-in and detachable connections of components, devices and systems only.
- In order to comply with IEC 61984 make sure that always the current-carrying part of the connector – no matter whether plug or receptacle – is fitted with socket contacts.
- For optimum protection of the cable connection make sure the connector is supplied with a strain relief.
- According to IEC 60352-2 – “Solderless connections” – crimp contacts are required.
- Make sure that there is no undue strain, pressure, flexing and torsion on the cable connection.

Installation and maintenance instructions LV Series

For a detailed list of all safety, installation and maintenance instructions, download our manual [A84-M.en](https://schaltbau.info/A84-M.en)!

Inverse-polarity protection

In order to guarantee inverse-polarity protection the LV-HPC Series must always be fitted with a pilot contact adapter or an air tube adapter when intended for intermating with existing connectors of comparable design made by other manufacturers.

Schaltbau, therefore, delivers LV-HPC Series connectors generally with a pilot contact adapter pre-assembled in the receptacle shell or an added air tube adapter with connectors for electrolyte circulation systems!

Inverse-polarity protection guaranteed when engaging connectors of the same LV-HPC Series

Safety instructions

- Carry out regular inspections of all protection and safety devices to see if they work properly.
- According to IEC 61984 connectors used as intended must not be engaged or disengaged when live or under load.
- A connector that does not engage easily requires special attention: Check for the correct orientation or if its contacts got bent or polluted. Never use force! The connector should always engage easily.
- To prevent dust and moisture from entering, make sure that the connector, when not mated, is covered by the protective cap.
- When disengaging a connector, pull the plug and never the cable.
- Use the connector only according to its intended use. Replace or repair damaged parts exclusively with original parts. Any other usage of or tampering with the connector is considered contrary to its intended use. No liability is assumed for damages and accidents caused due to non-compliance with the instructions or improper use of the connector.
- The connectors are designed for special environmental conditions as defined by “Specifications” on page 3 of this catalogue. Any use which goes beyond the limits of these specifications is not regarded as the intended use of the connector.

Visual inspections

Be sure to make visual inspections regularly. Improper handling of the connector, e.g. when hitting the floor with some impact, can result in breakage, visible cracks and deformation.

Defective and/or leaky parts must be replaced instantaneously!

Disconnecting when live or under load

Disconnecting the connector when live or under load is generally only permitted under exceptional circumstances or in the case of imminent danger to operational safety according to EN 1175-1.

If the charging connector is used without auxiliary contacts the life of the main contacts can be considerably shortened because of contact welding when engaging or disengaging the connector.

When unmating the connector when live or under load, an arc is generated. That is why disconnecting under load is prohibited in the neighbourhood of explosives and other ignition sources.

Keying Voltage keying, Application keying

Series LV-HPC

Schaltbau charging connectors feature keying to DIN VDE 0623-589. Keying plugs of different colours make it easy to identify the right connector visually.

• Voltage keying:

There are six standard battery voltages to choose from: 24, 36, 48, 72, 80, 96 V. The voltages are marked on the sides of the hexagonal keying plug. The keyed voltage shows in the inspection hole of the plug and receptacle shell.

Keying plug	Identification	Assembled in
	<ul style="list-style-type: none"> For high amperage HPC Used for battery Features tongue Colour RED 	Battery receptacle [●]*1 Wet-cell »N«
	<ul style="list-style-type: none"> For high amperage HPC Used for charger Features groove Colour RED 	Charging plug [●]*1 Wet-cell »N«
	<ul style="list-style-type: none"> Used for Battery / charger Colour GREY 	Battery receptacle [●]*1 Wet-cell »N« Charging plug [●]*1 Wet-cell »N«
	<ul style="list-style-type: none"> Used for Battery / charger Colour GREEN 	Battery receptacle [●]*1 Dry-cell »T« Charging plug [●]*1 Dry-cell »T«
	<ul style="list-style-type: none"> Used for Vehicle Colour YELLOW 	Vehicle plug [●]*1 Universal »U«

*1 Keyed voltage, shows in inspection hole: [●] = receptacle, [●] = plug

• Application keying:

This type of keying only allows for mating of connector halves for the same battery type. Thus a battery receptacle for dry-cell batteries is only intermateable with the charging plug for dry-cell batteries..

for the main contacts

Crimp tool CWZ-600-1
for both pilot and auxiliary contacts

Extraction tool AWZ-C/H
for pilot contacts of the
LV160/250 and LV320/400 series

Extraction tool LV160 AWZ-B
for aux. contacts of the LV160/250 series extraction
tool LV80 AWZ-B
for both pilot and aux. contacts of the LV80/120 series

• w/ crimping of main contacts

The applicable standard for crimping the main contacts is IEC 60352-2 – Solderless crimped connections. Schaltbau requires w/ crimping of main contacts. For that purpose Schaltbau recommends the use of the hand tool WHPH 10 and for major quantities the hydraulic crimping heads WHK 8S, WHK 8 and WHK 9 respectively of the company Stocko.

Order from: Stocko (www.stocko.de) or retailer
Ordering code: Stocko WHPH 10 or comparable tool of other manufacturers

• Crimping of pilot and auxiliary contacts

The applicable standard for crimping of pilot and auxiliary contacts is IEC 60352-2 – Solderless crimped connections. Schaltbau recommends the use of crimp tool CWZ-600-1 for wire sizes AWG 25 ... 9 (0.14 ... 6.00 mm²).

Order from: Schaltbau GmbH
Ordering code: Crimp tool CWZ-600-1

AWZ-C/H Extraction tool for pilot and aux. contacts

The tools are designed for the removal of pilot and auxiliary contacts from the assembled connector.

Series	Type of contact	Pin	Socket	Ordering code
LV320/400	Pilot contact Aux. contact	SCC-2.5-Ag LV320 SCC-2.5-Ag	BCC-2.5-Ag LV320 BCC-2.5-Ag	AWZ-C/H ---*
LV160/250	Pilot contact Aux. contact	SCC-2.5-Ag LV160 SBC-2.5-Ag	BCC-2.5-A LV160 BBC-2.5-Ag	AWZ-C/H LV160 AWZ-B
LV80/120	Pilot contact Aux. contact	LV80 SBC-2.5-Ag LV80 SBC-2.5-Ag	LV80 BBC-2.5-Ag LV80 BBC-2.5-Ag	LV80 AWZ-B LV80 AWZ-B

* Aux. contacts of the LV320/400 Series are secured from falling out of the shell by means of the slider.

with compliments:

Schaltbau GmbH manufactures in compliance with RoHS.

The production facilities of Schaltbau GmbH have been IRIS certified since 2008.

Certified to DIN EN ISO 14001 since 2002. For the most recent certificate visit our website.

Certified to DIN EN ISO 9001 since 1994. For the most recent certificate visit our website.

Electrical Components and Systems for Railway Engineering and Industrial Applications

Connectors

- Connectors manufactured to industry standards
- Connectors to suit the special requirements of communications engineering (MIL connectors)
- Charging connectors for battery-powered machines and systems
- Connectors for railway engineering, including UIC connectors
- Special connectors to suit customer requirements

Snap-action switches

- Snap-action switches with positive opening operation
- Snap-action switches with self-cleaning contacts
- Enabling switches
- Special switches to suit customer requirements

Contactors

- Single and multi-pole DC contactors
- High-voltage AC/DC contactors
- Contactors for battery powered vehicles and power supplies
- Contactors for railway applications
- Terminal bolts and fuse holders
- DC emergency disconnect switches
- Special contactors to suit customer requirements

Electrics for rolling stock

- Equipment for driver's cab
- Equipment for passenger use
- High-voltage switchgear
- High-voltage heaters
- High-voltage roof equipment
- Equipment for electric brakes
- Design and engineering of train electrics to customer requirements

We reserve the right to make technical alterations without prior notice.
