

MODEL 1080-3" MAGNETIC OIL LEVEL GAUGE

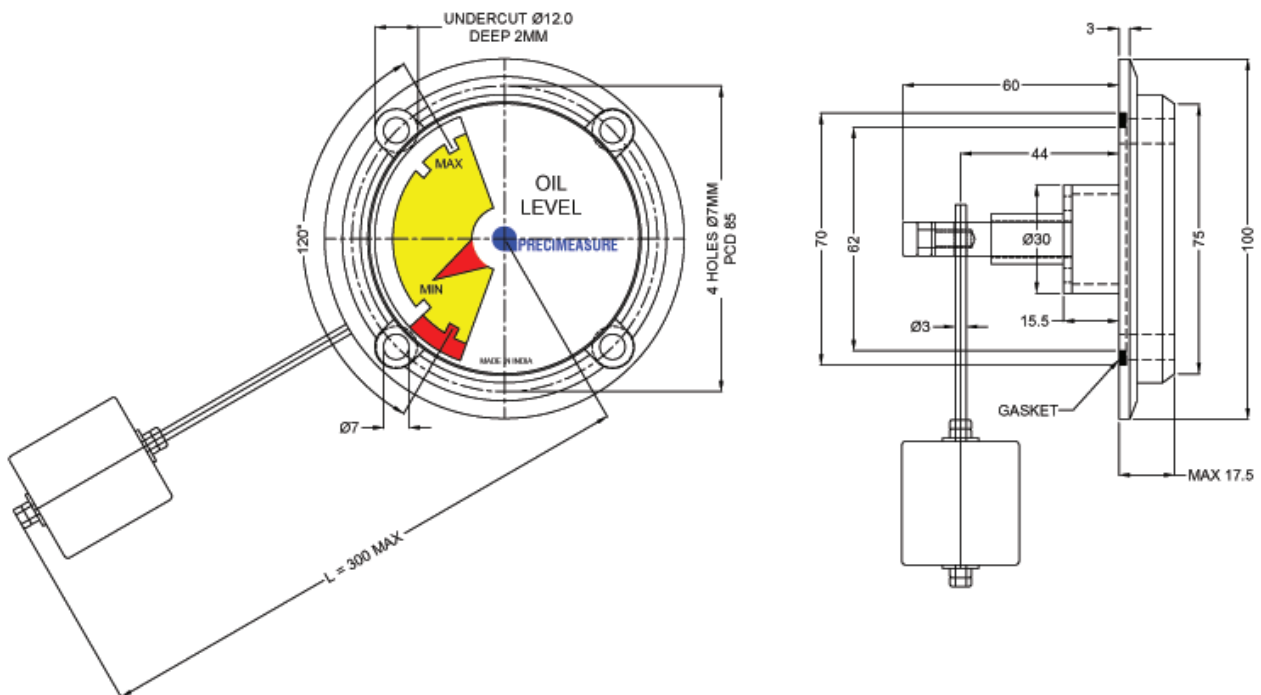

1080-3" is a compact magnetic oil level indicator for distribution transformers with overall dia. of 100mm. The radial movement of the float is transmitted magnetically to the pointer. This MOG comes without any contacts for alarm or trip.

Specification:

- ⇒ Pressure Die Cast Aluminum body with Electrostatic powder coating.
- ⇒ Red coloured needle on yellow background for clear visibility.
- ⇒ Ultra violet resistant polycarbonate dial cover with EPDM 'O' ring gasket below.
- ⇒ SS 304 Float arm of (max length 300mm) & polyurethane float.

General Arrangement

The MOG can be mounted on to the conservator side by four fixing bolts at locations shown on the overall arrangement drawing shown below. The studs are not included in the scope of MOG supply since they need to be provided on the conservator. The Nitrile rubber gasket at the rear side for sealing to the transformer is however supplied with the MOG.

Customers should specify the float arm length required at the time of ordering. Maximum length is 300mm.
